Armstrong® Lyra® PB Direct-Apply and InvisAcoustics™ Ceiling and Wall Panels Can Now Be Installed with Ceiling Adhesive

***New ceiling and wall solutions offer easy installation on exposed deck surfaces to
quiet noisy spaces***

LANCASTER, PA – Lyra® PB Direct-Apply and InvisAcoustics™ ceiling and wall panels from Armstrong Ceiling & Wall Solutions can now be installed directly to deck and wall surfaces with recommended ceiling adhesive. Both products offer easy adhesive installation, a variety of design options, and excellent sound absorption.

The most common complaint of occupants in open or exposed structure design is noise. Smooth textured Lyra PB Direct-Apply and InvisAcoustics panels both offer architects, designers, and owners a cost effective way to reduce unwanted sound in exposed structure spaces, including both new construction and retrofit applications.

Install to Variety of Deck Surfaces

Lyra PB Direct-Apply ceiling and wall panels can be installed directly to metal decking as well as concrete, drywall and plaster surfaces. InvisAcoustics panels can be directly adhered to concrete, drywall and plaster surfaces.

Both panels offer excellent sound absorption for new or existing spaces. Lyra PB Direct-Apply has an extremely high Noise Reduction Coefficient (NRC) of 0.95, indicating that it absorbs 95% of the sound that strikes it. With an NRC of 0.70, InvisAcoustics panels absorb 70% of the sound that strikes them.

All Lyra PB Direct-Apply panels are available in a variety of standard sizes as well as made-to-order sizes and colors. InvisAcoustics panels are available in a 2' x 4' size in white and tech black and can be field painted the same color as the deck to visibly disappear.

Part of the Armstrong® Sustain® Portfolio

InvisAcoustic white and field paintable panels and Lyra PB Direct-Apply panels are all part of the Armstrong® Sustain® portfolio and meet the most stringent sustainability compliance standards today, including LEED® v4, Living Building Challenge™, and the WELL Building Standard™. In addition, the panels can be recycled through the Armstrong® Ceilings Recycling Program at the end of their useful life.
