Armstrong Introduces Pre-Engineered Solution for Integrating Linear Lighting in WoodWorks® Ceilings

New clips and low profile light fixtures allow installation directly from suspension system

LANCASTER, Pa. – Architects and designers looking to incorporate linear lighting into their Armstrong® WoodWorks® ceiling designs now have easy new options. Armstrong Ceiling & Wall Solutions has introduced new lighting connection clips that make integration of lighting simple.

The new linear lighting connection clips are designed for use with standard Armstrong suspension systems and are engineered and tested to seamlessly integrate linear light fixtures with standard or custom WoodWorks linear ceilings.

The clips allow light fixtures to be suspended directly from the suspension system, eliminating the need to independently suspend lights from the deck or to modify the suspension system layout to incorporate lighting.

Compatible with Four WoodWorks Ceiling Lines

Approved for use in all seismic categories, the new linear lighting solution is compatible with four popular WoodWorks linear ceiling systems: Grille, Grille Tegular, Linear Solid Wood Panels, and Linear Veneered Panels.

Specially designed low-profile linear LED lights from Armstrong lighting partners Backlight srl and XAL coordinate with the length of the WoodWorks ceiling panels and are available in 2", 3-1/4", and 5-1/4" widths for a flush, sleek visual.

For more information on the new Armstrong linear lighting solution for WoodWorks Ceilings, visit armstrongceilings.com/woodworkslinearlighting.
